

COMMERCIAL CURTAIN WALLING

EURO SHOPFRONTS Aluminium Curtain Walling has endless benefits, providing practicality without compromising appearance.

Aluminium is the perfect choice for curtain walling for a variety of different reasons. It is relatively light yet incredibly strong and perfect for both domestic and heavy commercial use. This type of curtain walling can provide maximum solar penetration to the interior of the building and full visibility to the exterior for the people on the inside. It can be fitted with high tech security systems, a very important feature which is necessary these days.

Curtain Walling is also very durable and low maintenance – meaning that once the aluminium curtain walling is installed it will require no more maintenance than washing to keep your commercial property looking attractive and smart. Aluminium is ideal for this application due to its superb durability and weather resistance. It will not rot, rust, warp, chip or fade. So you can be sure when you purchase from **EURO SHOPFRONTS** that you have an addition to your building which you will benefit from for years to come.
